## The AWC Barber Shop

Sand Cordgrass is native to the southeastern coastal states. An attractive fountain-looking, free flowing plant, Sand Cordgrass can grow from 3 to 5 feet tall. Unfortunately during this time of year, Sand Cordgrass has turned brown and looks like straw. Here are a few more details -

- Grows in sandy soil on land and freshwater beaches.
- Flat leaf blades are only about 1/4 inch wide.
- Seedheads grow 2 to 8 inches long.
- Each plant spreads through the root system and will slowly grow in girth over time.
- Left alone, they can form dense clumps that are 18 to 20 feet in diameter.
- This grass should not be cut before winter as the foliage helps to insulate the plant's crown or core.

### *It's time for an AWC trim!*

If old foliage is left on too long, it can delay the crown's need to get warm and stimulate new growth. Now is the time to cut off the old and make way for the new green growth. When they are trimmed back in early spring, new growth gets a head start. Our AWC barbers will trim it back to it's youthful size. If you would like an AWC barber to trim your Cordgrass, just give us a call.

- *We will give you an estimate for a trim job and leave the clippings there to decay on their own, or*
- *We can quote a trim and take away the clippings, leaving a clean, manicured site.*
- *We also plant this grass....It's your choice!*

### *It's time for an AWC trim!*

**This is just one of many services  
Aquatic Weed Control offers to keep  
your waterways looking great.**
